### OID - OLT-CPU

Como podemos observar, cada coluna é referente a uma medição diferente de CPU; como também mostra memória livre e utilização de memória.

## OID Informações de TX e RX OLT.

Para TX usamos a OID 1.3.6.1.4.1.3902.1082.30.40.2.4.1.3 a qual conseguimos pegar a TX de todas SFPs (incluindo GPON e Uplink)

Para descobrir qual interface se refere precisamos converter o número ao fim da OID para Hexadecimal e calcular igual exemplo abaixo:

Pegamos interface 285278721 por exemplo.

Vamos converter o valor 285278721 para Hexa= 1101 0201

Cada conjunto de Bit representa uma parte da localização da porta física

Onde do Bit 31 para o bit 28 identifica o tipo de interface "1" ->1101 0201

Onde do Bit 27 para o bit 24 o Rack "1" ->1101 0201

Onde do Bit 23 para o bit 16 identifica o shelf "01" ->1101 0201

Onde Bit 15 ao bit 8 identifica shelf "02" -> 1101 0201

Onde Bit 7 ao bit 0 identifica Porta "01" -> 1101 0201

Para RX, sabendo que vai variar de ONU para ONU. usamos o OID  
1.3.6.1.4.1.3902.1082.500.1.2.4.2.1.2

Para obter o resultado em dB é preciso calcular o valor:

Algoritmo 1: Se o val >= 0 && val <= 32767, use val\*0.002-30

Algoritmo 2: Quando o val > 32767, use (val-65536)\*0.002-30 (nota o val=65535, é um valor inválido)

Exemplo: 7811, após o cálculo convertido: 880 \* 0.002 - 30 = -14.378 dB

16183, após o cálculo convertido: 16106 \* 0.002 - 30 = 2.366 dB
